Worksurfaces are designed for efficiency and attractiveness: devices can be plugged in at the front edge of tops for easy access. Adjoining worksurfaces can be the same height as the primary worksurface, or at a lower level. Some worksurfaces have a pedestal that attractively and usefully extends out from the end of the top, increasing space and legroom under the worksurface. Cabling is channeled with an accessible trough system through the product to wall and floor connections. Several options for desk surface support provide a range of aesthetic and functional solutions.

Wall-hung panels - in both wood and back-painted glass - create useful and attractive open storage space that is functional and decorative. Optional dividers provide a filing space that keeps files in view and accessible, yet neat and organized. Closed storage can have either wood or back-painted glass doors - and on overhead storage these doors can also be sliding.
